

# MARCO TRAC-IT Quality Control Module

The **MARCO Trac-IT® Quality Control Module (QCM)** empowers Quality Control Operators to effortlessly capture and share critical information with just a click.

Designed specifically to help businesses streamline and automate their quality control processes across all production areas, QCM conducts structured quality checks through a customizable scoring system. Every response is logged against the relevant individual or business aspect, measured against pre-set targets. This allows you to swiftly identify areas for improvement, from common machine faults to packaging presentation.

With MARCO's intuitive QCM application, you'll save time on administrative tasks and eliminate the need for physical paperwork. QCM automatically generates and emails reports to the appropriate personnel while securely storing all data on a central server, giving you instant access to your information whenever you need it.

By using MARCO's QC Master, a rugged tablet equipped with an 8-megapixel camera, you can instantly capture high-quality images and upload them to a secure server—providing visual proof of task completion or highlighting areas of concern.

Simply scanning a barcode automatically populates the relevant questionnaire for the specific station, ensuring accuracy and eliminating the risk of human error.

**Reduce human error with bar code scanning and drop-down lists**
