MARCO Trac-IT®
Yield Control Module

Real-time control of the food assembly process

The **MARCO Trac-IT® Yield Control Module** (YCM) is a comprehensive, effective, and reliable system with a proven history of delivering productivity improvements of over 30%.

Deskilling the packing process and allowing operators to focus on quality and presentation, whilst providing managers with the tools and data to monitor and manage their factory processes in real time.

Automatic Optimisation (AO) software continually monitors the weighing at individual stations and adjusts target weights to keep the portion weight on target.

The MARCO YCM module's convenient single-point line set up allows seamless product changes as the system stores the settings for each product.

MARCO's range of operator friendly Yield Control weighing workstations further deskill the packing process through the use of MARCO's language transparent '**one light = one fruit**' weight indicators.

Operators use a unique login, pin or RFID tag, for their workstations that track operator performance which in turn is fed back to the factory floor management in real time.

KEY FEATURES OF YCM

- **Automatic set-up of in line factory hardware**
- **Accurate, live data by operator**
- **Operator-friendly workstations**
- **Automatic Optimisation software keeps average pack weights on target**
- **Track packs per minute**
- **Real time data**
- **Eradicate paperwork**

BENEFITS OF YCM

- **Eradicate giveaway/overpack**
- **Improved productivity (by up to 30%)**
- **Reduced transport costs**
- **Reduced waste**
- **Increased profits**
- **Rapid return on investment (12 months/ 1 Season)**
- **Total control over production**
