

GOODS RECEIVED SPECIFICATION SHEET

The **Goods Received Module (GRM)** is a powerful application within the MARCO TRAC-IT suite, designed to streamline and control the process of booking raw materials into your facility.

By digitising and standardising this critical step, GRM ensures accuracy, efficiency, and full traceability from the moment goods arrive.

Using the MARCO DataMaster touchscreen terminal, connected to a barcode scanner and a calibrated scale, operators are guided through the booking-in process with clear on-screen instructions and visual prompts. This intuitive work flow minimises errors and speeds up the process.

As each item is booked in, barcode labels are automatically generated, enabling seamless scanning during production. This not only supports real-time stock reporting but also provides end-to-end traceability, ensuring compliance with industry standards and customer requirements.

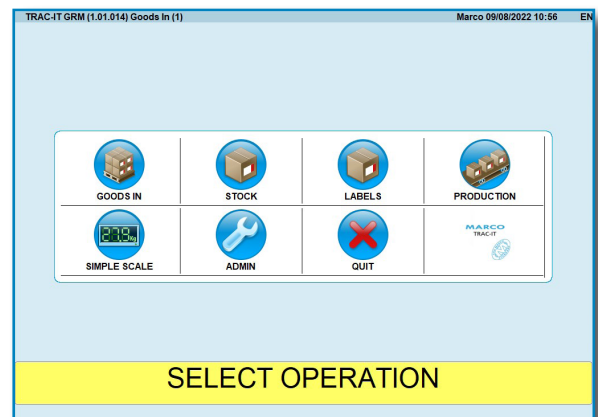

Integration for Complete Control

GRM integrates effortlessly with other MARCO TRAC-IT modules, creating a unified data environment that enhances traceability across your entire operation. From goods receipt to production and dispatch, every movement is captured and recorded.

The system offers comprehensive reporting tools, allowing you to generate detailed reports by specified date ranges, including:

- [Mass Balance - Batch](#)
- [Mass Balance - Total](#)
- [Reject Report](#)
- [Waste Report](#)

These reports provide actionable data to support quality assurance, cost control, and continuous improvement initiatives.

KEY FEATURES OF GRM

- Guided Booking-In Process
- Integrated Hardware
- Automatic Barcode Label Generation
- Comprehensive Reporting
- Modular Integration
- Actionable Insights

BENEFITS OF GRM

- Improved Accuracy
- Enhanced Traceability
- Regulatory Compliance
- Operational Efficiency
- Real Time Stock Management
