

PRODUCTION DATA DISPLAY

1 Summary

MARCO's Production Data Display (PDD) is a presentation solution providing real-time monitoring and product-related information to production lines.

All displays are managed from one central database used for YCM providing total flexibility for the information presented on each screen.

In addition to displaying information from our Yield Control Module, instructional media and messages related to the current product can be shown, including health & safety videos, offering valuable guidance and feedback to the operators and production team.

With bidirectional transfer capabilities, you can seamlessly integrate this data with other business systems, promoting streamlined work flows, accurate data sharing, and improved decision-making.

2 Key Features & Benefits

Increase Line Productivity	Constant communication with workforce
Motivate Operators	Increased Operator Safety
Remote Support	Instructional Messaging
Real Time Data	Batch Progress Status

4 Service & Support

The **MARCO Hi-Care support programme** is offered with all our products to ensure that your MARCO system is fully supported in the most efficient and timely manner. [Find out more](#)
